Since 1988, the Department of Orthodontics has offered an 11-week International Short-Term Course in Orthodontics.
Broad insight into Orthodontics and Academic teaching
In contrast to two- or three-day courses aiming at one particular topic, the Aarhus International Short-Term Course offers an intensive theoretical and clinical insight into Orthodontics in a University environment.

Basic concepts & advanced orthodontics
The program provides both an excellent background for advanced education and a profound understanding of possibilities and limitations in Orthodontics, with a special focus on Biomechanics.

A series of comprehensive theoretical and practical sessions, enable the participants to formulate the diagnosis and develop goal-oriented treatment plans. Exercises, Biomechanics, and design of appliances are essential components of the course.
Admission requirements
Admission to the Aarhus International Short-Term Course requires a dental degree from a recognized institution and a very good knowledge of English. The course runs in the autumn and the deadline for application is in May the same year. The number of positions available is limited to 10. It can be possible to get access to certain single topics, based on individual agreement.

For further information, please visit our website:
